Attack Surface Mapping + Vulnerability Report

€650

ONE-OFF

One-off external attack surface map with a vulnerability report.

// DELIVERABLES

- External asset discovery: domains, subdomains, IP ranges and exposed services identified through OSINT and active enumeration.
- An attack-surface map of the internet-facing footprint.
- A vulnerability report covering identified exposures and known weaknesses, rated by severity, with supporting evidence.

// EXPECTED OUTCOMES

- A factual picture of what is exposed to the internet today.
- Early identification of quick-win exposures and forgotten assets.
- A baseline external footprint to measure future change against.

// METHOD OF ENGAGEMENT

External, unauthenticated assessment run remotely. Passive intelligence gathering followed by active enumeration and exposure analysis, then a written report.

// TIMELINE

Indicative: ~3–5 business days from scope confirmation to report delivery.

- Project management is included in all prices.
